Connected to venv (Python 3.12.3)

Parte 1: Análisis del Rendimiento del Corredor

Objetivo: Analizar el rendimiento del corredor de pagos, el comportamiento de los usuarios y los patrones temporales **Entregables**: Tablas de métricas, visualizaciones, insights para el libro de Excel

Configuración

In [ ]:
```
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
import sys
from pathlib import Path

# Add scripts to path
sys.path.append(str(Path('..').resolve()))

from scripts import sql_queries
from scripts import visualizations as viz
from scripts.data_loader import get_connection, load_to_sqlite, create_indexes

# Ensure visualizations directory exists
Path('../output/visualizations').mkdir(parents=True, exist_ok=True)
```

Cargar Datos

In [ ]:
```
# Recreate database connection and load data
conn = get_connection()

# Load transactions
load_to_sqlite('../data/raw/transactions.csv', 'transactions', conn)
load_to_sqlite('../data/raw/users.csv', 'users', conn)
create_indexes(conn)

print("✅ Data loaded into SQLite in-memory database")
```

```
✅ Data loaded into SQLite in-memory database
```

Métrica 1: Volumen del Corredor y Tasas de Éxito

In [ ]:
```
# Execute corridor performance query
corridor_query = sql_queries.corridor_performance_query()
```

```
corridor_df = pd.read_sql_query(corridor_query, conn)

print("\n" + "="*80)
print("CORRIDOR PERFORMANCE ANALYSIS")
print("="*80)
print(corridor_df.to_string(index=False))
print("="*80 + "\n")

# Save for Excel export
corridor_df.to_csv('../output/csv_exports/corridor_performance.csv', index=False)
print("✅ Saved: ../output/csv_exports/corridor_performance.csv")
```

```
